

SPECIFICATIONS

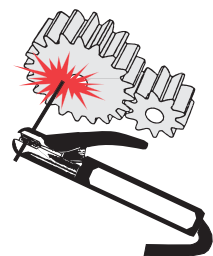

STANDARD FEATURES

AUTOcone 130

- Cone Capacity130 cones
- Uses standard 36" cone with base weight and reflective collars.
- Drum Length16'
- Drum Diameter95 1/2"
- Overall Trailer Length26'-9 3/4"
- Overall Trailer Height.....9'-11"
- Overall Trailer Width in Transport Configuration8'
- Overall Width with Cone Pickup Guide in Use.....11'-3/4"
- Empty Trailer Weight (No Cones)7,270 lbs.
- GVWR.....10,000 lbs.
- Brakes, Electric (Surge Brakes Optional)
- Axles.....Tandem 6,000 lb. EZ Lube
- SuspensionLeaf (Slipper) Spring
- Tires225/75D15 mounted on white 8 spoke wheels.
- Hitch.....Adjustable height interchangeable pintle or 2-5/16" ball.
- Trailer Plug.....7 pin blade or 6 pin round with adaptor. Others available.

OPTIONS

- 1) Floodlights for Nighttime Use
- 2) Auto Drop – Drops Cones at Chosen Spacing Intervals
- 3) Diesel 12v Power Supply for Continuous Use
- 4) Digital Distance Display for Manual Cone Spacing
- 5) Wireless Camera/Monitor – Allows In Cab Visibility
- 6) Rear Mounted Arrow Board
- 7) Paint Color

AUTOcone 130

This machine puts traffic cones on the road and picks them up. All that is needed is a pickup truck and driver. The operator is safe inside the cab of the truck.

www.centrevilletrailer.com • (410) 758-1333

The machine tows using a 3/4 ton pickup truck. No modifications are required on the truck.

The machine holds 130 standard 36" cones with base weights attached.

130 cones will cover 1 1/4 miles at 50' spacing or 2 1/2 miles at 100' spacing.

The machine will place and pick up cones from either side of the trailer. Moving from one side to another is simple and takes seconds.

The driver controls the machine using simple controls, usually just one button push per cone. Our AUTODROP option measures and automatically drops cones at your preset spacing.

The hitch easily converts from pintle ring to ball, and provides generous height adjustments.

The entire cone storage drum rotates as needed to supply or retrieve cones. This rugged heavy duty gearbox handles the job with ease.

AUTOCONE 130

We designed the machine using interchangeable components. Troubleshooting the machine is done with a simple 12v test light.

The machine will pick up cones that are still standing, or have been knocked over. The guide positions and feeds the cone where it is needed.

This pile of cones costs well over \$1000 and is a tempting target for theft. Our machine stores the cones, prevents theft, and saves the labor of constantly loading and unloading cones from trucks.

The cone hangs – waiting to be dropped on the road as you drive along. A simple button press drops the cone where you want it. The "hang height" is adjustable to accommodate road conditions and trailer hitch heights.

The machine operates on 12vdc power. The batteries shown allow the trailer to be totally self contained allowing any available truck in the fleet to do the job.
